A POTENTIOMETRIC METHOD OF STUDYING SELECTIVITY DURING HYDROGENATION OF FATS IN SOLVENTS (Potentiometrichekskiy Metod issledovaniya Selektivnosti pri Gidrirovaniyu Zhivotnykh Rastvoriteleyakh). Feb 61 [6]p. 2 refs. RTS 1744. Order from LC or SLA m\$1.80, ph\$1.80 61-19103

Trans. of Nauchnyye Doklady Vysshey Shkoly. Khimiya i Khimicheskaya Tekhnologiya (USSR) 1959, no. 1, p. 28-31.

Potentiometric measurements during hydrogenation of fats and of their simplest analogues, unsaturated acid esters, give a correct indication of the change in fatty acid composition and of the sequence in the saturation of acids of different degrees of unsaturation. With hydrogenation of fats in solvents, the process is sufficiently selective. The potentiometric method is very suitable for a study of the reaction selectivity during hydrogenation of both natural fats and oils and their synthetic analogues. (Author)
